About the artist

I have been passionate about marine aquaria, system design, set up and maintenance since 2001. I began when I was in the military to relieve stress. I have been studying marine life and ecology ever since. In 2005 one of my personal aquariums won the honor of Tank of the month in Reef Hobbyist Online Magazine at www.Reefland.com. I consider marine aquariums to be an incredibly beautiful and living art form. As graduate from Arkansas State University with a B.S. in Biology I take great pride in my work and have thoroughly researched each and every specimen that I consider for your system. My experience in the hobby and long standing friends in the industry put me in the perfect position to setup and maintain your reef. Currently I have multiple systems in operation and I personally aquaculture over 100 species of corals. In 2007 I setup a 180 gallon display/vivarium for Arkansas State University in the lobby of the Biological Sciences Building. Please feel free to visit this reef during campus hours. Last year, I also built a 1000 gallon aquaculture facility for reef ecosystem research on campus. I also have excellent references within the city from some wonderful people. I handle every aspect of the aquarium from the initial design to species selection, care and maintenance. Five percent of my proceeds are donated to help restore and protect the natural reef ecosystems. In addition, I quarantine all livestock to ensure they are happy, healthy and parasite free before introducing them into their new home with you!

Services Provided

Custom system design, setup and maintenance

Fish and Invertebrate selection and quarantine

Comprehensive water testing and analysis

On call 24/7 so you never have to worry.

From concept. To Reality!
